Vocabulary sets
Iteration 1
What it is about?
The menu sets page show users sets of drinks. Each set kind of drink hot or cold. When users chose a set, there is navigation to the order page.

Actions for users to take
Users can decide what they want to order now. They can either choose a drink from set a or b (can click the square plus icon on the left to preview words in the set) or choose which sets they want to order.

Iteration 2
Design principle(s) applied
- People love to have choices. Choices = control.
- Too many choices lead to choice paralysis.

Design rationale
-Add set c (foods) to the user.
-Still provide choices to users. Users can control whether they want to learn something new or review an old set.
